

## INSTRUCTIONS FOR VIEWING A WEB MODEL

Follow these instructions exactly.

- If you received a web model in an email, drag the attachment to your desktop.
- Double click it to unzip the folder, follow unzip instructions.
- Go into the webmodel folder and find the “index.html” file.
- Drag this file to the main window of the MS Internet Explorer browser.
- At this point, you will probably get a little error message right below the address bar. There will probably be a little orange shield icon that says: “To help protect your security, ...”

- right click on this bar and select “allow blocked content” and answer yes to the next dialog box.
- This will open the model in your browser. When it is loading, the screen says “Tekla”, it will take a moment for the file to load, or if you have an old computer, a minute.
- When the model appears, zoom in with your mouse middle scroll wheel.
- Select the rotate button, click on some part to set the center of view and drag around to move around the model.
- You can view the model from any angle and zoom into see any detail.
- For more viewing tips, click on the tiny help link at the bottom left of your screen or just right click to get a pop up menu.
